

We are currently seeking individuals with **Autism Spectrum Disorder (ASD)** and individuals without ASD between ages 10 and 25 years for a research study on sensorimotor behavior and brain function of ASD.

The Neurobehavioral Development Research lab (ndrlab) currently is seeking individuals with and without Autism Spectrum Disorder (ASD) for participation in a clinical research study. This study aims to better understand the wide range of symptoms that are present in this disorder and determine their brain bases.

Eligible individuals will be asked to complete the following non-invasive tests:

- questions about medical, developmental and family history
- autism diagnostic testing

- tests of fine motor performance
- tests of gross motor coordination
- tests of brain anatomy and function

Testing will be conducted at KU and KU Medical Center. All procedures have been approved by our local Institutional Review Board.

Participants will be compensated for their time.

Please contact our research team at 785-864-4461 or email us at ndrlab@ku.edu.
