Funding support from HRSA

*“Healthcare knowledge is exploding, but it’s often not traveling the last mile to ensure that **patients get the right care in the right place at the right time.** Leveraging technology to spread best practices through case-based learning and mentoring of providers, **we can move knowledge** - instead of patients—to get better care to rural and underserved communities across the country.”*

Dr. Sanjeev Arora,

*Founder and Director, Project ECHO,
University of New Mexico School of
Medicine*
