

PROJECT ECHO

Extension for Community Healthcare Outcomes

Interdisciplinary Pain Management - moving knowledge not patients

Chronic Pain is the #1 reason patients seek medical care.

Are you and your practice interested in updates on the latest evidence based treatment advances for patients experiencing chronic pain?

A Kansas ECHO pilot will focus on medical, pharmacological and psychological considerations to enhance patient functioning and quality of life.

Why ECHO:

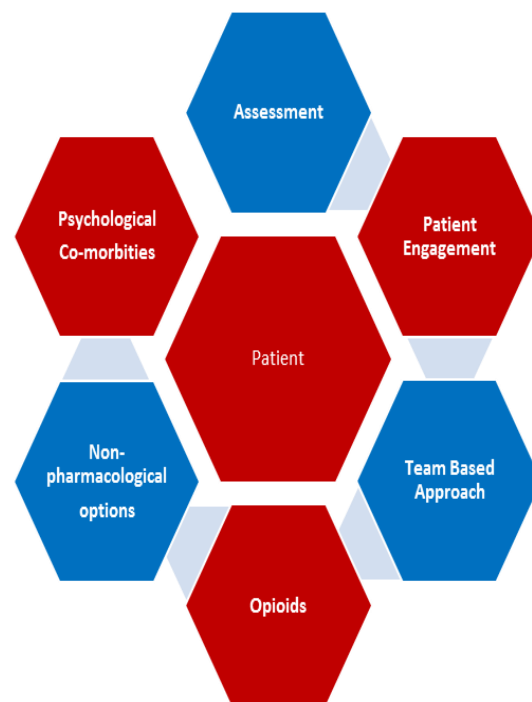

Using secure, easy-to-use videoconferencing technology, an environment of group learning with best practice protocols is established with practices across the state. These protocols help reduce variation in care and improve outcomes for patients experiencing chronic pain across the lifespan.

Bi-Weekly Series

1. Cohort 1: Winter 2017 thru Summer 2017
2. Cohort 2: Summer 2017 thru Winter 2017
3. Topics include: Scope of Chronic Pain, Team-based approach to the management of Chronic Pain, Role of Opioids in managing Chronic Pain, Non-opioid therapeutic options, Goal setting and patient engagement

ECHO Pain Management Outcomes:

1. Meet practice goals for taking care of patients with chronic pain
2. Increased access to evidence-based multi-faceted treatments
3. Improved pain care and quality of life for Kansas patients

Clinicians Time

- 16 hours—6 months
- 1 hour initial preparation
- 1/2 hour case preparation
- 11 hours/1 hour per ECHO/13 sessions
- 1.5 hours survey completion
- 2 hours staff time -
