

PROJECT ECHO

Extension for Community Healthcare Outcomes

University of Kansas Medical Center

Behavioral Health ADHD

Moving knowledge not patients

Attention-deficit/hyperactivity disorder (ADHD) is the most common neurobehavioral disorder of childhood and can profoundly affect the academic achievement, well-being, and social interactions of children according to the American Academy of Pediatrics.

The Center for Disease Control estimates the annual costs of childhood ADHD—including health care, education, loss of family productivity to be between \$38 and \$72 billion.

KUMC Project ECHO will offer a four part interdisciplinary Behavioral Health ADHD to aid Kansas professionals involved with pediatric ADHD.

Series Topics

1. Assessment of ADHD
2. Updates on Behavioral Health
3. Updates on Medication
4. Educational Involvement with ADHD

ECHO ADHD Outcomes

1. **Increase** access to evidence-based multi-faceted treatments
2. **Improve** ADHD patient care with best with best practice suggestions for involving behavioral health in the treatment of ADHD
3. **Identify** strategies for improving coordination of care and treatment between health care and school settings.

Series Dates and Times

1. April 12 — noon till 1:00 pm
2. April 19 — noon till 1:00 pm
3. April 26 — noon till 1:00 pm
4. May 3— noon till 1:00 pm

KUMC ECHO

Our goal for ECHO is to improve the outcomes for Kansas patients and their families dealing with ADHD. ECHO creates a virtual community of learners engaged in collaborative learning via secure, easy-to-use videoconferencing technology. Case-based, interactive training sessions help disseminate the latest evidenced-based research in both medicine and behavioral health while sharing “best practices.” **Participants have the opportunity of earning no-cost CME/CNE or a Certificate of Attendance.**
