I am going to the clinic. The clinic is an important place. Helpers at the clinic will ask me questions. I will play with games and toys.

I will also see a doctor at the clinic. The doctor is one of the helpers. The doctor will listen to my heart and look in my ears. I will also be weighed and measured.

When the doctor is finished, I will rest in another room while the doctor and the other helpers talk.

When they are finished talking, I will return to the room. The helpers will tell us what they learned about me and give us some information papers. Then we can go home.

That is what will happen when I go to the clinic.
