

Do you have Diabetes?

- **If you are 14-28 years old and you have diabetes, or**
- **If you are the parent of a 14-28 year old who has diabetes...**

We invite you to participate in our focus groups at the University of Kansas Medical Center to help us understand your needs better as we start a clinic for patients making the transition from pediatric to adult care during those critical years.

Come hear other people talk about the same concerns you have and help us design a new clinic for young adults who are moving from pediatric to adult diabetes care for the first time – you will be also be able to come to that clinic.

Focus groups will be led by clinicians-researchers in the KU Department of Pediatrics and the KU Diabetes Institute's Cray Diabetes Self-Management Center at KUMC under the direction of Dr. David C. Robbins, Professor of Medicine.

If you are interested, call (913) 588-1045 or email Louise Voelker at lbales-voelker@kumc.edu.
