

Additional Information for Health Information Management:**Health Information Management:**

1. Since an EHR was not utilized, discuss what the benefits would be had the clinical staff used an electronic health record when caring for the patient.
2. Educate other professionals about Meaningful Use and discuss how this scenario could meet the Meaningful Use Stage 2 Core Measure of providing an electronic summary of care document to another healthcare setting.
3. Incorporate the use of Nursing Home Compare and Home Health Compare into the process of informing the patient of home health agencies and skilled nursing facilities available to the patient.
4. Assess the patient's health record to determine whether or not it meets accreditation and licensure documentation requirements regarding the discharge planning process.
