

Additional Information for Physician Assistant:**Physician Assistant:**

The inpatient team began formulating a safe discharge plan at admission. For BA, this is her second stroke. To prevent further strokes, the inpatient Family Medicine team initiated interventions to reduce her risk for stroke and improve management of her chronic conditions of Hypertension, Hyperlipidemia and Type 2 Diabetes.

1. What medical interventions were initiated during the hospitalization to reduce her risk for recurrence of an ischemic stroke and improve management of her chronic conditions?
2. What barriers exist that may prevent her from benefiting from these interventions once discharged?
3. What resources exist that may facilitate benefit from these interventions once she is discharged?
4. What potential harm is associated with the medical interventions initiated during her hospitalization?
5. If so, what can we do to mitigate the risk of harm?
