

Correlation of Voice Therapy Compliance and Responses to Voice Handicap Index

Kavookjian H, Holcomb A, Irwin T, Garnett JD, Kraft S

Responses to the Voice Handicap Index (VHI) and VHI-10 correlate with Voice Therapy (VT) compliance and can provide insight into motivation and engagement of dysphonic patients.

489 Patients

Patients who completed some VT were more likely to use voice for work

Patients who did not attend VT had significantly lower initial VHI/VHI-10 scores

Patients who dropped out of therapy had similar VHI score at follow-up to those who completed therapy
