

*Do YOU, or
someone you know,
have dementia
with Lewy bodies?*

CONSIDER THE SHIMMER COG1201 STUDY

The SHIMMER study is an experimental drug trial assessing the safety of drug capsules taken by mouth as a possible treatment for people diagnosed with mild to moderate dementia with Lewy bodies.

ARE YOU...

- / Age 50–85 and diagnosed with dementia with Lewy bodies?
- / May be given drug or placebo to take by mouth
- / Attend 12 study visits over 8 months
- / Blood draws
- / MRI or CT scans
- / Memory tests
- / Vital signs
- / Skin biopsy
- / Optional Lumbar puncture
- / Reimbursement may be available to you or your caregiver

*We need YOU to participate
in this important study.*
