Brain Health In Down Syndrome Program

Join the program to change the future.

WHO WE ARE

OUR MISSION
The University of Kansas Alzheimer’s Disease Research Center launched the Brain Health in Down Syndrome Program in 2023 to drive efforts to prevent Alzheimer’s disease in individuals with Down syndrome.

WHAT WE NEED

BE A RESEARCH HERO
We need individuals with Down syndrome to join the program to help us gain insights, reduce risk, and improve lives. Be part of the progress to prevent Alzheimer’s disease in people with Down syndrome.

SMALL STEPS, BIG DIFFERENCE
Join the team to help empower our research. Members visit the research center every 16 months for a brain health exam used by our scientists and shared with others around the world.

LIFE-CHANGING RESEARCH & RESULTS
The opportunities are endless. Members can participate in optional research studies focused on improving our understanding of Alzheimer’s and how to prevent it.

WE’RE IN THIS TOGETHER
Most people with Down syndrome experience the brain changes of Alzheimer’s by the time they are 40 and develop memory problems after the age of 50. Help unlock clues that will lead us closer to a cure.

Be a research hero. Join today.
