

Interested in possible brain benefits from a heart-healthy or ketogenic eating pattern?

Participate in the TDAD Study

The TDAD (Therapeutic Diets in Alzheimer's Disease) study is a three-month study for adults aged 50-90 years old diagnosed with Mild Cognitive Impairment or Alzheimer's Disease, who have a dedicated study partner and are interested in brain benefits from healthy eating patterns.

Why Participate?

- Monthly financial support for groceries
- Compensation for completed study visits
- Education manuals with healthy recipes, tips for dining out, and sample menus
- One-on-one instruction from a Registered Dietitian
- 24/7 access to a Registered Dietitian

Contribute to the future of Alzheimer's prevention for millions
