* Funding consists of research, training, and service grants, and clinical trial revenue that is received from external sources and managed by KUMC Research Institute, Inc (RI). Internal pilot grants are excluded. Each research award and its funding is attributed to the primary department indicated by the principal investigator (PI), which in most cases is the academic home of the PI; therefore, this report is not meant to portray total research activities by KUMC's research centers and institutes. Further, beginning with their FY 2016 Annual Report, the RI has reattributed awards indicated in our source systems that show as lying within a center or institute back to the academic home of the PI, where possible. The "NIH" column includes flow-through amounts. The # of awards listed are those grants, contracts or clinical trials which received funding during the fiscal year.

¹ Due to revisions in how the KUMC Research Institute (RI) prepared its Annual Report beginning with FY 2016, grants awarded to Center or Institutes have been reattributed to the academic home for the principal investigator (see the disclaimer on page 2). We are not restating FY 2013 - FY 2015 on this report, but have modified FY 2016 and FY 2017 to match what is represented in the RI Annual Report.

² Includes gifts from KU Endowment Association to the University of Kansas Medical Center's schools and departments during the fiscal year to support research efforts, grants held by affiliated entities like KU Health Partners, Inc. and the Medical Practice Association (Wichita) which directly support research within KUMC schools and departments.

Disclaimer: This report has been modified from its original publication on February 19, 2018. The total extramural amount is unchanged, but there have been modifications to the assignments of awards to individual units, so that grants are attributed to the academic department of the principal investigator. In addition, the FY 2017 figure representing affiliated sources of research funding has been reduced from \$5,502,246 to \$5,482,246.
