

Equipment

Randall Selitto Pressure Analgesiometer

Used in assays of:

Cutaneous Sensitivity to Mechanical Stimulation

Mechanical Allodynia

Mechanical Analgesia

One IITC Randall Selitto Instrument, compatible with rat or mouse testing, is available. The hand held instrument delivers a force, monitored in real-time with a digital meter, to the extremity of a test subject. Pressure is applied until the desired response is obtained. Both blunt and pointed applicators are available to meet the needs of individual investigators.
